

G2 Flightcases. Robust customization

The G2 Flightcases Light are, as their name suggests, the lighter variant of the traditional flightcases. If you want robust flightcases with a lighter specification, the G2 Flightcases Light are a great alternative.

The G2 Flightcases Light are robust and afford good protection of your products during transport.

The G2 Flightcases Light have 5 mm MDF as base material. The top layer is HPL, as with traditional flightcases. Do you want to save weight? Then we use lightweight plastic honeycomb boards. As with traditional flightcases, we finish with built-in locks, hinges and handles. On request, this can also be done with surface mounting hardware, which is sufficient for many applications and is also more economical. The G2 Flightcases Light are also available as a trolley with a pull-out handle, or with the well-known blue swivel or fixed wheels.

Gefken

Gefken provides solutions that perfectly suit your way of working. Solution-focused customisation. A starting point that hasn't changed since 1959. Perhaps the reason why Gefken, with its own factory in the Netherlands, has grown into the European specialist in the field of custom-made cases and flight cases. Our extensive range of aluminium profile cases and custom-made flightcases, from Gefken Basic to G2 Flightcases, offers solutions for every sector and application. All our products make work easier and more efficient.

From custom-made cases and flightcases to engineered specials

With our own team of engineers, industrial product designers, experts in the field of aluminium profiles and construction possibilities, and our factory with modern machinery, we are able to think beyond cases and flightcases.

Have a conversation with the makers and discover that the best solutions are more surprising than you think. Interested? Make an appointment with Gefken.
