

G2 Flightcases: maken meer mogelijk

The G2 Flightcases have a robust construction that offers unprecedented possibilities for customization. The clear anodized aluminum profiles give these flightcases a more luxurious appearance than most traditional flightcases.

Additionally with TU Delft, we developed a glue joint that is 22% stronger than conventional flightcases with a rivet construction.

The G2 Flightcases use 9 mm birch plywood as the panel base material. The top layer is HPL. Scratch resistant and extremely strong. Do you want to save weight? Then we use lightweight plastic honeycomb sheets for the panels. The G2 Flightcases are finished with built-in locks, hinges and handles. Do you want to be able to move the flightcases easily and make them stackable as well? Then we mount the well-known blue wheels underneath and stack the flightcases in the lid. If the application allows it, we use our specially developed smart lid which has an inner dimension of only 8 millimetres, saving space and cost.

Gefken

Gefken provides solutions that perfectly suit your way of working. Solution-focused customisation. A starting point that hasn't changed since 1959. Perhaps the reason why Gefken, with its own factory in the Netherlands, has grown into the European specialist in the field of custom-made cases and flight cases. Our extensive range of aluminium profile cases and custom-made flightcases, from Gefken Basic to G2 Flightcases, offers solutions for every sector and application. All our products make work easier and more efficient.

From custom-made cases and flightcases to engineered specials

With our own team of engineers, industrial product designers, experts in the field of aluminium profiles and construction possibilities, and our factory with modern machinery, we are able to think beyond cases and flightcases.

Have a conversation with the makers and discover that the best solutions are more surprising than you think. Interested? Make an appointment with Gefken.
